

For Luke

How to work with the Peterbilt Atlantic public-source repository. Written so you can pick it up and start answering Tim's questions right away.

The repository

The repository lives here:

<https://github.com/EVEglyphDesign/peterbilt-atlantic-public-source>

It is private. You will be added as a read-only collaborator. Everything inside it is compiled from public sources — the website, socials, trade press, LinkedIn, league sites, BBB — and every claim is cited to where it came from.

How to use it with Claude

The fastest way to work with it is to point your Claude account at GitHub and ask questions directly. If you are on Claude Enterprise or Claude for Work with the GitHub connector enabled, the steps are:

- In Claude, open the connector settings and enable the GitHub connector.
- Authorise it against the GitHub account that has been given access to the repo.
- Once connected, tell Claude which repository to focus on:
EVEglyphDesign/peterbilt-atlantic-public-source.
- Ask whatever Tim is asking you to answer. Claude will read the files directly. Cite the file path when you quote something back — that is how we keep the answers honest.

If your Claude account does not have the GitHub connector, you can still open files in the browser and paste the text you need into a chat. Slower, but it works.

What is in there

- README.md — the top-level orientation. Start here.
- company/ — Peterbilt Atlantic website sweep, staff roster, community footprint, ad and marketplace surface, inventory overview, affiliated entities.
- tim_hawkins/ — profile, quotes, community, timeline, sources.
- craig_allen/ — profile, marketing footprint, community, sources.
- luke_weatherby/ — your profile, public footprint, sources. Read this first so you know what is already on the record about you.
- telemetry_appendix/ — a bridge document that connects the repository to the broader conversation Tim and I are having about data and telemetry.

Ground rules

- Read-only. You have access to the repository. You are not editing it. If you see something wrong or missing, tell me and I will fix it the same day.
- Please do not copy or fork it. Everything in it is public source, but the compilation, the structure, and the framing are mine to manage. If we need a working copy for something specific,

we'll build one together.

- Please do not update it directly. I know how enterprise data of this kind behaves once it starts branching. I am going to run this one until we have a shared governance model and the right people trained on it. Once that is in place, if you want the keys, they are yours.
- Answer Tim's questions directly. You do not need to route through me. If Tim asks you something and the answer is in the repo, quote the file and give him the answer. If it is not in the repo, say so plainly.

Why we are doing it this way

I have seen operations lose control of their own story because tools were handed out before the team was ready to receive them. That is not going to happen under Tim's watch, and I am not going to be the one who introduces it. When the governance is right and the data models are agreed, we open it up. Until then, I hold the keys and you have the access you need to help Tim think.

If any of that lands the wrong way, tell me and we'll talk it through. Nothing here is fixed except the read-only rule.

Thanks for stepping in on this.

Repository: [EVEglyphDesign/peterbilt-atlantic-public-source](#) (private). Access is granted by invitation. All corrections are welcome and are actioned the same day they are raised.
