

EVEGLYPHDESIGN · HAWKINS TWIN PLATFORM

Warranty GENE — Luke access prep

EgD-WGB-003 · Tim’s customer service initiative · Five routine dealer data-rights requests, each standalone

For the next sit-down with Luke. Five routine dealer data-rights requests, framed as a customer service initiative. Tim cares deeply about the people who buy trucks from Hawkins, and he wants his team to give them clearer answers at the counter about coverage, campaigns, and history on their own vehicle. The data Hawkins needs to do that is data Hawkins already has rights to under existing dealer agreements. Every ask reads as customer service. Nothing else.

Internally, the picture is different from the outbound frame. Hawkins is turning on feeds into its own sovereign data replica — the record Hawkins already owns, under agreements Hawkins already signed. Each counterparty is a source that keeps the replica current on its lane; the replica is the destination, and it is authoritative because it is Hawkins'. Feeds provision on their own timelines: some open quickly, some slowly. The replica exists and updates from every feed that is open. Automation adds value on top of what the replica holds, and the value compounds as more feeds come online. No single counterparty holds the initiative; the initiative holds them.

Least questions is the goal. Until we have results to show, every extra sentence in an outbound message is a question we're inviting. Keep each ask short. Keep each ask standalone. Do not link the asks to each other in writing. What sits behind the initiative on our side — the replica, the automation, the compounding value — is not part of any outbound message. It is understood internally and stays internal until there is a result worth showing.

Contact map

#	Party	Who Luke asks	What we're asking for
1	CDK Global	Luke's CDK Global account manager	Read-only service-account access to Hawkins' own DMS records under existing CDK Drive subscription
2	PACCAR (Peterbilt District Manager)	Luke's PDM	Read-only service-account access to Hawkins' dealer library and portal under existing PACCAR agreements
3	Peter (Hawkins internal)	Peter, in conversation	Authorization to attach a Hawkins service-account mailbox to existing dealer subscriptions

#	Party	Who Luke asks	What we're asking for
4	Powertrain manufacturers	One rep per manufacturer	Read-only service-account access under existing authorized-dealer authorization
5	Chassis and air-system suppliers	One rep per manufacturer	Read-only service-account access under existing authorized-dealer authorization

1. CDK Global

Who Luke asks. His current CDK Global account manager.

What Luke says.

We're rolling out a customer service initiative for our owner-operators — giving them a clearer picture of their vehicle history when they come in. To do that on our side we need a read-only service-account attached to our existing CDK Drive subscription, covering the same records our advisors already see. Service-account mailbox, not a personal login.

What Luke does not say.

- Nothing about a workflow, an integration, a project, a due-diligence review, or a proof of concept.
- Nothing about Fortellis, PRWS, Decisiv, or PSSM in this message. Those are separate conversations, weeks apart, if at all. Each name Luke adds to a CDK message is another question the account manager will ask.
- Nothing about scope beyond the eight BAC codes and "the same records our advisors already see."

What good looks like. A service-account login is provisioned. Nothing else changes.

2. PACCAR — Peterbilt District Manager

Who Luke asks. Luke's PDM.

What Luke says.

We're rolling out a customer service initiative for our owner-operators — helping them get better answers on their vehicle's coverage and history at the counter. On our side, that means a Hawkins service-account mailbox with read access to the same PACCAR.net and PACCAR Solutions material our team already uses, under our existing dealer agreements. All eight BAC codes.

What Luke does not say.

- Nothing about PACCAR Connect, SmartLINQ, MX warranty, PartsPRO, or CARB/EPA in this message. Same reason as CDK — every named surface is a question.
- Nothing about telematics, data-integration services, or partner scope.
- No reference to what the account will be used for beyond "the same material our team already uses."

What good looks like. A service-account login is provisioned. Nothing else changes.

3. Peter — internal

Who Luke asks. Peter, in a private conversation. Not by email.

What Luke says.

Tim's customer service initiative — giving owner-operators a clearer picture of their vehicle when they come in. Housekeeping on my side: I want to attach a Hawkins service-account mailbox to the CDK, PACCAR, and supplier subscriptions we already pay for, so it's not tied to any one person's login. Same data, service-account login instead of personal.

What Luke does not say.

- Nothing about the warranty workflow, the twin, Dany's work, or what runs behind the initiative on our side. Peter knows enough of the picture already; anything more said out loud is a detail he doesn't need to carry and a detail that could travel.
- Nothing about a "program" or "project." Peter authorizes housekeeping tied to customer service; Peter does not authorize a program.
- No numbers, no vendors named beyond CDK and PACCAR at first pass.

What good looks like. Peter says yes — which he will, because it's Tim's initiative and it's for customers — and the service-account mailbox is created on Hawkins' side within the week.

4. Powertrain manufacturers

Who Luke asks. One rep per manufacturer, three separate conversations.

- **Cummins** — district service manager or dealer support contact.
- **Eaton** — Roadranger territory manager.
- **Allison** — Authorized Distributor territory manager.

What Luke says, per manufacturer.

As an authorized [Cummins / Eaton / Allison] service dealer, we're rolling out a customer service initiative for our owner-operators — clearer answers on coverage and history at the counter. Under our existing dealer authorization, please provision a Hawkins service-account with read access to the same [manufacturer] warranty portal our team already uses.

What Luke does not say.

- Nothing about API access, session logs, or bulk lookups.
- Nothing about reconciliation, denial rates, or claim workflows.
- Nothing about the other two manufacturers.
- Nothing about Peterbilt or PACCAR by name in this message.

What good looks like. Three service-account logins, one per manufacturer, each covering the read access the team already has via personal logins.

5. Chassis and air-system suppliers

Who Luke asks. One rep per manufacturer, four separate conversations, spaced out.

- **Meritor (Cummins Meritor)** — authorized-dealer service contact.
- **Bendix** — warranty rep or authorized-dealer contact.
- **ZF (Wabco)** — Commercial Vehicle Solutions warranty rep.
- **Dana (Spicer)** — authorized-dealer contact.

What Luke says, per manufacturer.

As an authorized [Meritor / Bendix / ZF / Dana] service dealer, we're rolling out a customer service initiative for our owner-operators — clearer answers on coverage and history at the counter. Under our existing dealer authorization, please provision a Hawkins service-account with read access to the same [manufacturer] warranty portal our team already uses.

What Luke does not say.

- Same list as Counterparty 4. Nothing about session logs, APIs, or component-family scope.
- Nothing about the other three suppliers.
- No mention of the powertrain manufacturers.

What good looks like. Four service-account logins, one per manufacturer.

Three things off every conversation

1. **The workflow.** Never named. No "reconciliation," no "due diligence," no "proof of concept," no "twin." The frame is customer service, full stop.
 2. **The scope.** Never described as broader than "the same material our team already uses" or "the same records our advisors already see." Any language that suggests we want more than what personal logins already give us invites a governance review.
 3. **The other counterparties.** Never named inside another counterparty's message. Each ask stands alone.
-

Order of operations

Spaced, not stacked. The pattern is: one ask, then wait for confirmation before the next.

1. **Peter first.** In conversation, no email. Get the service-account mailbox authorized on Hawkins' side.
2. **CDK, standalone.** Send after Peter confirms.
3. **PACCAR, standalone, a week later.** Not the same week as CDK.
4. **Powertrain manufacturers, one at a time, one per week.** Cummins first (biggest warranty dollar impact), then Eaton, then Allison.
5. **Chassis and air-system suppliers, one at a time, one per week.** Order does not matter; spacing does.

Total elapsed time to have all eight external service-accounts provisioned: eight to ten weeks. That is a feature, not a bug — none of the counterparties sees a burst of activity from Hawkins in the same window.

Each ask goes out on its own schedule; each feed opens on the counterparty's own timeline. The replica exists from the moment Peter authorizes the service-account mailbox and CDK provisions the first login. Every additional feed that comes online enriches what the replica already holds, and enriches what automation on top of the replica can do at the counter. There is no waiting for a full set.

Provenance

- **Revision.** This is EgD-WGB-003 revision 4. Prior revisions (five surfaces, four-counterparty sweep, five-counterparty full sweep) are superseded. The scope did not change; the visibility did. Every earlier revision described a workflow, a due-diligence review, or a proof of concept. That framing invited questions we cannot yet answer with results. This revision replaces those frames with a customer service initiative — plain and simple — which is what it is, and which invites no questions.
 - Prior revision preserved in git history at commit `61ebc2f` for the record.
-

-
- Warranty Procedure Manual v2026.7 — uploaded to the project workspace.
 - CARB/EPA Emission Component Coverage matrix — uploaded to the project workspace.
